

Nahi Kennedy-Nunez

Senior Product & UX Designer

hello@nahi.design | linkedin.com/in/nahidesign | nahi.design | New York City Metro Area

I design tools for people working under pressure: engineers mid-outage, analysts with ten minutes to explain a dataset, patients looking for care. Eight years of end-to-end product design in enterprise and data-heavy AI products, at IBM, Pachyderm, HPE, and a CDC-funded health nonprofit. Red Dot Award winner. The IBM work is still in production six years on.

CORE COMPETENCIES

End-to-end product design • Design systems, zero to one • Research built into the sprint • WCAG 2.2 • Sole designer on small teams • Enterprise client workshops

EXPERIENCE

UX Design Consultant — DecisionSigma.ai

Nov 2024 - Nov 2025 | United States (Remote)

- Redesigned the forecast chart component to support both simplified and detailed model views, reducing cognitive load for non-technical stakeholders while preserving analytical depth for energy engineers.
- Led end-to-end product design across four disciplines: UX research, product strategy, UI design, and design systems, as the sole designer on a 90-hour engagement spanning five distinct product surfaces.

Career break

Nov 2024 - Present

- Time away from full-time work for health, with one consulting engagement during the period.

Product Designer to Sr. Product Designer — Hewlett Packard Enterprise

Mar 2023 - Nov 2024 | New York, United States

- Held design function as sole designer through the Pachyderm acquisition and subsequent team reduction, maintaining product continuity and design output across a contracting organization.
- Delivered a WCAG 2.2 compliant design system for two cross-functional teams in four months, production-ready down to the documentation, before a department restructure halted release.
- Redesigned the highest-friction user flows after research, cutting inbound support volume and giving engineering back time that had been going to triage.
- Established cross-team design and development workflow standards in Jira, reducing design-to-engineering handoff friction and enabling more predictable sprint planning across product and engineering.

Product Designer — Pachyderm Inc.

May 2021 - Mar 2023 | Oakland, CA

- Shipped multiple major product features across the platform, contributing to company growth from Series B funding through successful acquisition by Hewlett Packard Enterprise.
- Built a bi-weekly user research practice from scratch, embedding usability testing into the product development cycle and reducing late-stage design rework through earlier signal collection.

User Experience Designer — IBM

Jan 2019 - Apr 2021 | San Jose, CA

- Led design of watsonx Data Lineage from brief to ship in nine months, with a two-person UX team and three named enterprise banking partners, securing \$100K+ in new contracts and three new Fortune 500 clients.
- The work won a Red Dot Award and is still in production six years after delivery.
- Owned design of IBM Data Privacy, a new watsonx product enabling automated privacy-policy enforcement on provisioned datasets; managed a design intern and researcher from zero to shipped across a large, ambiguous scope; core product architecture persists in IBM Software Hub today.
- Generalized the Data Lineage pattern beyond the original three-team mandate to serve ETL, AI model, and additional internal teams, negotiating adoption across seven teams without formal authority. The abstraction remained in production through six subsequent years of development.
- Ran co-creation workshops with enterprise clients including ING, State Street, Rabobank, GM, and Ford across three time zones to validate and pressure-test designs for two major watsonx platform products.

Design Strategist — Asian & Pacific Islander American Health Forum

Apr 2017 - Oct 2018 | Oakland, California

- Provided capacity-building services to federally funded HIV clinics nationwide as part of Capacity for Health, a CDC-funded initiative; personally partnered with at least 10 organizations across the United States.
- Researched and designed HIVAZ.org, a statewide HIV care connection platform for Arizona's Department of Health and Human Services and Aunt Rita's Foundation.
- Led a statewide service-delivery evaluation for Washington State, identifying capacity gaps across funded grantees and driving a major process shift, including a new statewide resource clearinghouse.
- Developed Design Thinking trainings and a CDC-approved brand development curriculum for the national provider network; trained 30+ personnel and coached leadership on human-centered problem-solving.
- Led concept development, theory of change, and information architecture for one of the first online education platforms in the HIV healthcare field.

EDUCATION

UX Design Immersive — General Assembly

2016

B.S., Hospitality & Tourism Management — San Francisco State University, College of Business

2012 - 2015

CERTIFICATIONS

Enterprise Design Thinking Practitioner • CDC-Sponsored Training for HIV Counselor Trainers

SKILLS

Tools: Figma, FigJam | Languages: English (Native or Bilingual)
